**YOU DON'T JUST RUN YOUR AGENCY.
YOU DRIVE IT HIGHER WITH YOUR OWN ENERGY AND INTELLIGENCE.**

Talk to us and we'll show you new ways to push your power out into the world and become a magnet for success. **Solutions start here.**

WIRELESS TECHNOLOGY IS OPENING UP NEW POSSIBILITIES EVERY DAY.

UNIFIED COMMUNICATIONS

Stay in touch with your mobile teams using Push to Talk-enabled BlackBerry® smartphones and Catalyst interoperability solutions. Increase the reach and reliability of your Land Mobile Radio (LMR) networks.

MOBILE SECURITY

Give your team BlackBerry or Windows Mobile® smartphones loaded with CREDANT® Mobile Guardian Gatekeeper to help them manage and enforce security policies while on the move.

FIELD FORCE MANAGEMENT

Keep tabs on your team's status, schedules, and case information with Verizon Wireless Field Force Manager on their mobile devices.

MOBILE OFFICE

Access your back-office network from the field with CREDANT Mobile Guardian Gatekeeper and CradlePoint® CTR500 Mobile Broadband Routers.

Send sensitive documents and files from the field to be printed at the back office with a remote printing application from Cortado.

Mobile solutions require a reliable network, so we test ours every day.

Our real-life test men and women made over 16 million data tests while traveling over 1 million miles last year alone. The results show we can set up and complete large data transfer sessions with a greater rate of success than our competitors. So when you log on, you stay logged on, in more places. We're proud of our network. See more at verizonwireless.com/bestnetwork.

Our Business Solution Alliance (BSA) program combines applications and services that target your specific agency needs—all connecting over the Verizon Wireless 3G network.

USE TECHNOLOGY TO BEAT THE PERPS TO THE PUNCH.

CHALLENGE

You lead a federal task force with the purpose of bringing an end to a methamphetamine epidemic. To accomplish your mission, your task force has to interact with multiple police departments spread across several counties and jurisdictions. Communication is paramount to success, but each police department uses a separate LMR network, making it difficult to coordinate efforts. You need a more efficient way for your task force to communicate with various police departments.

SOLUTION

- + Give your team Push to Talk-enabled BlackBerry smartphones equipped with Catalyst third-party bridge technology to be less conspicuous during ops and to connect your federal agency to the different counties' local police LMR systems.
- + Use Catalyst as an interoperability solution that provides capacity and coverage to complement your existing networks by integrating Push to Talk with LMR networks.

RESULTS

- + Your federal agents and local police jurisdictions communicate and coordinate with each other under a unified system.
- + Your task force can quickly report newfound intelligence to the police departments, and police officers in the field can report suspicious activity to the task force.
- + Law enforcement participating in the case is more integrated, and increased monitoring of criminal activity spurs increases in arrests and decreases in drug production and distribution.

REMOVE COMMUNICATION BARRIERS.

Coordinate your efforts across networks and jurisdictions.

YOUR INVESTIGATION IS ONLY AS SECURE AS YOUR INFORMATION.

CHALLENGE

You're tasked with the investigation and prosecution of domestic and foreign terrorist threats. Your team is involved with collecting and analyzing complex information from numerous sources and then quickly sharing that information with multiple agencies. Because much of your intelligence comes from confidential informants, the information must remain secure—even as it's being shared with multiple team members around the globe.

SOLUTION

- + Equip your team with BlackBerry and Windows Mobile smartphones that allow them to quickly view photos, reports, and spreadsheets.
- + Use CREDANT Mobile Guardian Gatekeeper to centrally enforce the security of mobile data wherever it resides, and manage and enforce security policies by group or individual.
- + Employ OMNILERT's Amerilert to quickly share information with team members and simultaneously send alerts to their mobile phones, landlines, and desktops.

RESULTS

- + Your team and their sources share confidential information knowing it will be transmitted securely.
- + Urgent information is shared quickly so your whole team is kept up to date.
- + Better data sharing and coordination helps your team bring terrorists to justice.

YOUR TEAMS ARE ON THE CASE. KEEP THEM ON THE MAP.

CHALLENGE

Investigating an organized crime ring is a complicated undertaking. You have teams of investigators spread across the country uncovering new information, suspects, and evidence every day. And as your teams begin to unravel this complicated web of connections, you need a way to keep all the new developments straight. You also need a way to track team members and vital case information without interrupting ongoing investigations.

SOLUTION

- + Deploy Field Force Manager on your team members' mobile devices to share team status, schedules, and case information with task leaders in real time.
- + Employ components from 2sms to send secure information from computers to mobile devices and vice versa.

RESULTS

- + Team members have control over their case schedules; task-force leaders can use policy base controls for visibility into team-member schedules and routing.
- + Instant access to case numbers, reference files, and information on key players via secure SMS removes the need for paperwork and increases productivity.
- + Your team stays on top of case developments and ahead of the organized crime ring.

KNOW WHERE YOUR
TEAMS ARE.

Track them easily
and securely.

WHEN SECURITY BREACHES ARE NOT AN OPTION.

CHALLENGE

Auditing a company that has been charged with an anti-trust violation presents some major logistical concerns. Your teams need to be onsite at the company to sort through files and data, but they also need access to critical programs and information that remain at your back office. Sending and receiving documents and files securely is also extremely important to the investigation. You need a way to exchange data on a private, secure network controlled by your organization.

SOLUTION

- + Provide your team with BlackBerry or Windows Mobile smartphones and Dell® notebooks equipped with Verizon Wireless Mobile Broadband Built-In.
- + Install CREDANT Mobile Guardian Gatekeeper for wireless data protection.
- + Use a remote printing application called Cortado. Team members can send private documents directly from their mobile devices to the printers at the back office.
- + Deploy a CradlePoint CTR500 Mobile Broadband wireless router to enable secure Internet access for up to 32 Internet-ready devices, including printers and notebooks without built-in Internet access, over the Verizon Wireless Mobile Broadband network.

RESULTS

- + Investigators know that the confidential information being sent is secure.
- + Employees can quickly send important files and documents to your back office for sharing and archiving.
- + Your onsite teams can securely access private files and data from your back office.

KEEP PRIVATE
INFORMATION PRIVATE.

Share sensitive files and print
documents securely in the field.
